

Rami GB

Technical Lead & Senior Software Engineer

Applied AI / Agentic Systems / Developer Tooling

Stockholm, Sweden | Remote / Hybrid

[LinkedIn](#) | [GitHub](#) | [ramigb.com](#)

PROFILE

Hands-on technical leader with nearly two decades in software engineering, from startups to web, OTT and Smart TV platforms. I build agentic workflows, LLM tooling and evaluation harnesses, and help teams put AI to practical use. My coding workflow is largely agent-driven, with clear scope, observable behavior and maintainable code.

CORE EXPERTISE

Applied AI: Agentic coding, LLM evaluation, MCP, local models, RAG, developer automation and team enablement.

Engineering: TypeScript, JavaScript, React, Next.js, Node.js, GraphQL, SQLite, AWS and Smart TV platforms. Python and Rust in independent projects.

Leadership: Technical direction, hands-on architecture, cross-functional delivery and startup leadership.

RECENT EXPERIENCE

Leyra - Technical Lead

March 2026 - Present | Stockholm

- Lead hands-on web engineering and platform direction following the Magine / Accedo One merger; use agentic development and automation in my workflow.
- Started **AI Fika**, a biweekly meetup for AI news, demos and practical tool usage; maintain a shared AI news channel.
- Part of a **seven-person hack-day team** that built a Lite platform in **less than two days**, using LLM-generated code across backend, web, Android, iOS and Tizen MVP apps.

Magine Pro - Lead Engineer

September 2020 - March 2026 | Stockholm

- Led web and Smart TV engineering for media and streaming products, with React, GraphQL, Redux and styled-components across Tizen, webOS and Chromecast.
- **Co-led development of an alternative back-office admin product** using agentic coding, July-September 2025; demonstrated the result at **IBC 2025**.
- Maintained a shared AI news channel and helped colleagues adopt practical agentic development workflows.

Magine Pro - Senior Frontend Developer

February 2020 - September 2020 | Stockholm

Built web application experiences with a focus on product quality and maintainable frontend architecture.

Cabonline Technologies - Frontend Developer

August 2019 - February 2020 | Stockholm

Built taxi-booking features for Sweden and Norway, API integrations and CMS websites. Implemented customer feedback with Google Analytics and Google Data Studio. Stack: React, Next.js, MobX, Gatsby and Strapi.

Gears of Leo - JavaScript Engineer

April 2018 - July 2019 | Stockholm

Built sportsbook features with React, JavaScript and TypeScript, contributing frontend and full-stack work.

SELECTED INDEPENDENT PROJECTS

Personal tools and experiments spanning agent orchestration, deployment, code intelligence and model evaluation. Project maturity and limitations are documented in the repositories.

Epopetes

Agent orchestration / TypeScript / Claude Code / Codex

Built a harness for long-running autonomous coding sessions, with fresh-context cycles, bounded state, live steering, completion checks and token reporting. Includes a local dashboard and run reports; an early tool improved through daily personal use.

github.com/ramigb/epoptes

Progressive Decode

LLM evaluation / Python / Quantized-model experiments

Built an exact reconstruction simulator and evaluation harness for progressive quantized-weight refinement. The documented experiment covered **1,000 prefixes and 55,000 selector/budget observations**. The tested design failed its research gate; I documented the negative result and stopped runtime development. No runtime speedup is claimed.

github.com/ramigb/prog-decoding-research

Semantic Skeletonizer

MCP / Rust / TypeScript and React code intelligence

Built a Rust MCP server that extracts a structural graph of a TypeScript/React repository using SWC, with file watching and graph updates to provide codebase context for LLM tooling.

github.com/ramigb/semantic_skeletonizer

Outpost

AI deployment workflows / TypeScript / Infrastructure tooling

Built an early AI deployment harness for user-owned infrastructure, with typed commands, approval controls, operation history, health checks and rollback workflows.

EARLIER EXPERIENCE

Schibsted Media Group - Software Engineer

February 2017 - May 2017 | Stockholm

Worked with the Aftonbladet WebTV team on media product development.

Schibsted Media Group - Tech Lead, SCM Ventures / Next Marketplaces

September 2016 - February 2017 | Stockholm

Explored new business verticals and startup opportunities, contributing early-stage technical decisions and rapid product exploration.

HekSar.com - CTO / Co-founder

October 2015 - September 2016 | Ramallah

Built the product end to end, across backend, frontend, architecture and delivery. Stack included PHP, Codelgniter, Node.js, Express, AngularJS, ffmpeg and AWS.

Seenlab - CEO / CTO / Founder

December 2013 - January 2016 | Ramallah

Founded an online education startup for high school certificate preparation in Palestine and online tutoring. **Led a team of four** while building the software and owning product direction.

Self-Employed - Freelance Web Developer

January 2007 - August 2016 | Ramallah / Amman

Delivered client web applications using PHP, Codelgniter, Laravel, Ruby on Rails, Apache Flex, Joomla, Drupal and WordPress. Overlapped with the startup roles above.

Earlier roles

2006 - 2014

Senior Web Developer at Blue IT & Media Services, building an internal PHP framework; site development at Ikbis, spanning frontend, backend and Ruby on Rails; IT Specialist and later Head of Eco Beach Division at Trace Group Est., managing operations and beach-cleaning contracts including Emirates Palace.
